## T 8493 EN

### TROVIS 3793 Smart Positioner (HART®)

#### Application

Single-acting or double-acting positioner for attachment to pneumatic control valves.  
Self-calibrating, automatic adaptation to valve and actuator.

Set point	4 to 20 mA
Valve travel	3.6 to 300 mm
Opening angle	24 to 170°

The positioner ensures a predetermined assignment of the valve position to the input signal. It compares the input signal received from a control system to the travel or rotational angle of the control valve and issues a corresponding output signal pressure (output variable).

#### Special features

- High air capacity
- Modular design: easy retrofitting or exchange of pneumatic or option modules
- Simple attachment to all common linear and rotary actuators:
  - SAMSON direct attachment
  - NAMUR rib
  - Attachment to rod-type yokes according to IEC 60534-6-1
  - Attachment according to VDI/VDE 3847
  - Rotary actuator attachment according to VDI/VDE 3845
- Non-contact position sensing
- Plain-text display with NAMUR Recommendation NE 107 states and messages on the device
- Integrated diagnostic functions
- Simple one-knob, menu-driven operation
- LCD easy to read in any mounting position thanks to selectable reading direction
- Configurable with a computer over the SSP interface using the TROVIS-VIEW software
- Variable, automatic start-up with four different initialization modes
- Sub (substitution) initialization mode allows the positioner to be started up in case of emergency whilst the plant is running without having to change the valve position.
- All parameters saved in non-volatile EEPROM
- Two-wire system with a small electrical load of 495 Ω

- Adjustable tight-closing function
- Continuous zero monitoring
- Integrated temperature sensor and operating hours counter
- Self-diagnostics, messages as condensed state conforming to NAMUR Recommendation NE 107
- Integrated EXPERTplus diagnostics for control valves (► T 8389-2)
- Pressure sensors to monitor the supply air and signal pressure
- Air capacity adjustable by software

Fig. 1: TROVIS 3793 Electropneumatic Positioner

## Design and principle of operation

The TROVIS 3793 Electropneumatic Positioner is mounted on pneumatic control valves and used to assign the valve position (controlled variable  $x$ ) to the control signal (set point  $w$ ). The positioner compares the electric control signal of a control system to the travel or opening angle of the control valve and issues a signal pressure for the pneumatic actuator. The positioner mainly consists of a non-contact travel sensor system (2), pneumatics and the electronics with the microcontroller (4). The output of the standard version is either single or double acting; which means both the Output 138 and Output 238 can provide the output variable and route the signal pressure to the actuator.

The positioner can be configured to meet requirements of an application by adding a maximum of two pneumatic modules (A, B) and electronic option modules (C, D). The pneumatic modules mainly consist of a microcontroller, which operates an i/p converter with downstream spool valve. Depending on the actuator used, an output of the positioner can be sealed to achieve a single-acting function. The option modules additionally provide individual functions, e.g. recognition of the end positions.

The valve position is transmitted either as an angle of rotation or a travel to the pick-up lever, from there to the travel sensor (2) and forwarded to the microcontroller (4). The PID algorithm in the microcontroller compares the valve position measured by the travel sensor (2) to the 4 to 20 mA DC control signal issued by the control system after it has been converted by the A/D converter (3). In case of a set point deviation, the pneumatic module (A, B) causes the actuator (1) to be either vented or filled with air. As a result, the closure member of the valve (e.g. plug) is moved to the position determined by the set point.

The pneumatic module is supplied with air. The flow rate of the module's output can be restricted by software.

The positioner is operated by a rotary pushbutton (9) for menu navigation on the plain-text display (8).

The extended EXPERTplus diagnostics are integrated into the positioner. They provide information on the control valve and positioner and generate diagnostic and status messages, which allow faults to be pinpointed quickly.

Signal range	4 to 20 mA, two-wire device, reverse polarity protection, split-range operation (can be configured as required, minimum span 4 mA)			
Static destruction limit	40 V, internal current limit approx. 40 mA			
Minimum current	3.75 mA for display/operation (HART® communication and configuration) 3.90 mA for pneumatic function			
Load impedance	$\leq 9.9 \text{ V}$ (corresponds to $495 \Omega$ at 20 mA)			
Supply air				
Supply air	2.5 to 10 bar/30 to 150 psi			
Air quality acc. to ISO 8573-1	Max. particle size and density: Class 4 Oil content: Class 3 Pressure dew point: Class 3 or at least 10 K below the lowest ambient temperature to be expected			
Signal pressure (output)	0 bar up to supply pressure			
Hysteresis	$\leq 0.3 \%$			
Sensitivity	$\leq 0.1 \%$ , adjustable by software			
Start-up time	After interrupted operation < 300 ms: 100 ms After interrupted operation > 300 ms: $\leq 2$ s			
Transit time	Up to 10000 s separately adjustable for exhaust and supply by software			
Direction of action	Reversible			
Air consumption <sup>2)</sup>	$\leq 300 \text{ l}_n/\text{h}$ with 6 bar supply pressure, depending on module			
Air output capacity (when $\Delta p = 6 \text{ bar}$ )				
Actuator (supply)	$32 \text{ m}_n^3/\text{h}$ with one pneumatic module ( $K_{V \max}(20^\circ\text{C}) = 0.34$ ) $60 \text{ m}_n^3/\text{h}$ with two pneumatic modules of the same sort ( $K_{V \max}(20^\circ\text{C}) = 0.64$ )			
Actuator (exhaust)	$37 \text{ m}_n^3/\text{h}$ with one pneumatic module ( $K_{V \max}(20^\circ\text{C}) = 0.40$ ) $70 \text{ m}_n^3/\text{h}$ with two pneumatic modules of the same sort ( $K_{V \max}(20^\circ\text{C}) = 0.75$ )			
Environmental conditions and permissible temperatures				
Permissible environmental conditions according to EN 60721-3				
Storage	1K6 (relative humidity $\leq 95 \%$ )			
Transport	2K4			
Operation	4K4 -20 to +85 °C: All versions -40 to +85 °C: With metal cable glands -55 to +85 °C: Low-temperature versions with metal cable glands Observe the limits in the test certificate for explosion-protected versions.			
Resistance to vibration				
Vibrations (sinusoidal)	According to DIN EN 60068-2-6: 0.15 mm, 10 to 60 Hz; $20 \text{ m/s}^2$ , 60 to 500 Hz per axis 0.75 mm, 10 to 60 Hz; $100 \text{ m/s}^2$ , 60 to 500 Hz per axis			
Bumps (half sine)	According to DIN EN 60068-2-29: $150 \text{ m/s}^2$ , 6 ms; 4000 bumps per axis			
Noise	According to DIN EN 60068-2-64: 10 to 200 Hz: $1 (\text{m/s}^2)^2/\text{Hz}$ ; 200 to 500 Hz: $0.3 (\text{m/s}^2)^2/\text{Hz}$ 4 h/axis			
Recommended continuous duty	$\leq 20 \text{ m/s}^2$			

<sup>1)</sup> On request

<sup>2)</sup> Based on temperature range -40 to +85 °C

Influences	
Temperature	≤0.15 %/10 K
Supply air	None
Requirements	
EMC	Complying with EN 61000-6-2, EN 61000-6-3, EN 61326-1 and NAMUR Recommendation NE 21
Degree of protection	IP 66
Conformity	 
Electrical connections	
Cable glands	Max. four, M20x1.5 or ½ NPT
Terminals	Screw terminals for 0.2 to 2.5 mm² wire cross-section (max. 1.5 mm² with the option modules)
Explosion protection	
	See table for explosion protection certificates
Materials	
Housing and cover	Die-cast aluminum EN AC-AlSi12 (Fe) (EN AC-44300) acc. to DIN EN 1706, chromate and powder coating
Window	Makrolon® 2807
Cable glands	Polyamide, nickel-plated brass, stainless steel 1.4305
Other external parts	Stainless steel 1.4571 and 1.4404 (316 L)
Communication	
	TROVIS VIEW with SSP/HART® Revision 7
Weight	
	1.4 to 1.6 kg (depending on version)

## Technical data · Optional additional functions

<b>Analog position transmitter</b>		
Version	Two-wire system, galvanic isolation, reverse polarity protection, reversible direction of action	
Auxiliary power	10 to 30 V DC	
Output signal	4 to 20 mA	
Operating range	3.8 to 20.5 mA	
Error indication	2.4 or 21.6 mA	
No-load current	1.4 mA	
Static destruction limit	38 V DC · 30 V AC	
<b>Software limit switches</b>		
Version	NAMUR	PLC
Signal state	Non-conducting Conductive	Galvanic isolation, reverse polarity protection, switching output acc. to EN 60947-5-6 Galvanic isolation, reverse polarity protection, binary input of a PLC acc. to EN 61131-2, $P_{max} = 400 \text{ mW}$
Non-conducting Conductive	$\leq 1.0 \text{ mA}$ $\geq 2.2 \text{ mA}$	Non-conducting Conductive ( $R = 348 \Omega$ )
Static destruction limit	32 V DC/24 V AC	16 V DC/50 mA
<b>Binary output</b>		
Version	NAMUR	PLC
Signal state	Non-conducting Conductive	Galvanic isolation, reverse polarity protection, switching output acc. to EN 60947-5-6 Galvanic isolation, reverse polarity protection, binary input of a PLC acc. to EN 61131-2, $P_{max} = 400 \text{ mW}$
Non-conducting Conductive	$\leq 1.0 \text{ mA}$ $\geq 2.2 \text{ mA}$	Non-conducting Conductive ( $R = 348 \Omega$ )
Static destruction limit	32 V DC/24 V AC	32 V DC/50 mA
<b>Binary input</b>		
Version	Galvanic isolation, reverse polarity protection	
Voltage input	0 to 24 V DC	
Input resistance	$\geq 7 \text{ k}\Omega$	
ON switching state	$U_e > 15 \text{ V}$	
OFF switching state	$U_e < 11 \text{ V}$	
Static destruction limit	38 V DC/30 V AC	
<b>Forced venting</b>		
Version	Galvanic isolation, reverse polarity protection	
Voltage input	0 to 24 V DC	
Input resistance	$\geq 7 \text{ k}\Omega$	
Signal state	Active Not active	$U_e < 11 \text{ V}$ $U_e > 15 \text{ V}$
Static destruction limit	38 V DC/30 V AC	
<b>Inductive limit switches</b>		
Version	For connection to switching amplifier according to EN 60947-5-6, SJ2-SN proximity switches, reverse polarity protection	
Measuring plate not detected	$\geq 3 \text{ mA}$	
Measuring plate detected	$\leq 1 \text{ mA}$	
Static destruction limit	20 V DC	
Permissible ambient temperature	-50 to +85 °C	
<b>Mechanical limit switches</b>		
Floating contact	Changeover contact/SPDT (single-pole/double-throw type)	
Static destruction limit	38 V DC · 30 V AC · 0.2 A	
Permissible ambient temperature	-40 to +85 °C	

## Pressure sensors

<b>Pressure sensors</b>		
Pressure range	0 to 14 bar	
Permissible ambient temperature	-40 to +85 °C	

## Mounting the positioner

The positioner can be attached directly to the Type 3277 Actuator (175 to 750 cm<sup>2</sup>) over a connection block. In actuators with "actuator stem extends" fail-safe action, the signal pressure is routed over an internal hole in the actuator yoke to the actuator. In actuators with "actuator stem retracts" fail-safe action, the signal pressure is routed to the actuator over ready-made external piping.

Using the appropriate bracket, the positioner can also be attached according to IEC 60534-6-1 (NAMUR recommendation). The positioner can be mounted on either side of the control valve.

A pair of universal brackets is used for the attachment to Type 3278 Rotary Actuators or other rotary actuators according to VDI/VDE 3845. The rotary motion of the actuator is transferred to the positioner over a coupling wheel with travel indication.

A special version of the positioner allows it to be attached according to VDI/VDE 3847. This type of attachment allows the positioner to be replaced quickly while the process is running by blocking the air in the actuator. The positioner can be attached directly to the Type 3277 Actuator using an adapter bracket or adapter block. Alternatively, it can be attached to the NAMUR rib of a control valve using an additional NAMUR connection block.

## Version

The TROVIS 3793 Electropneumatic Positioner can be used as a single or double-acting positioner, depending on the combination of the available pneumatic modules.

The modular design also allows diverse optional additional functions (option modules) to be added and adapt the positioner on site to the specific requirements.

- **TROVIS 3793** · Electropneumatic positioner for control valves, HART® communication, on-site operation, local communication with SSP interface, EXPERTplus diagnostics, pressure sensors to monitor the supply air and signal pressure

## Optional modules

The modular design of the TROVIS 3793 Positioner allows it to be adapted to specific requirements. The air capacity and direction of action can be varied by the installation of different pneumatic modules (Fig. 3). Optional additional functions are available by using option modules (Fig. 4 and Fig. 5).

If the positioner is ordered with additional pneumatic modules and/or option modules, they are ready installed and connected upon delivery.

**Table 1: Available pneumatic modules**

Article code	Function
P3799-0000	Dummy module (seals the slot connections and must be used when only one pneumatic module is installed)
P3799-0001	Output 138 and Output 238 module (single and double acting)

## Operation

The positioner is operated using one proven, user-friendly rotary pushbutton: the various menu levels, parameters and values are selected by turning the button. By pressing the button, the required setting is activated. All parameters can be checked and changed on site.

All values are displayed on the plain-text display. The reading direction of the display can be rotated by 180°.

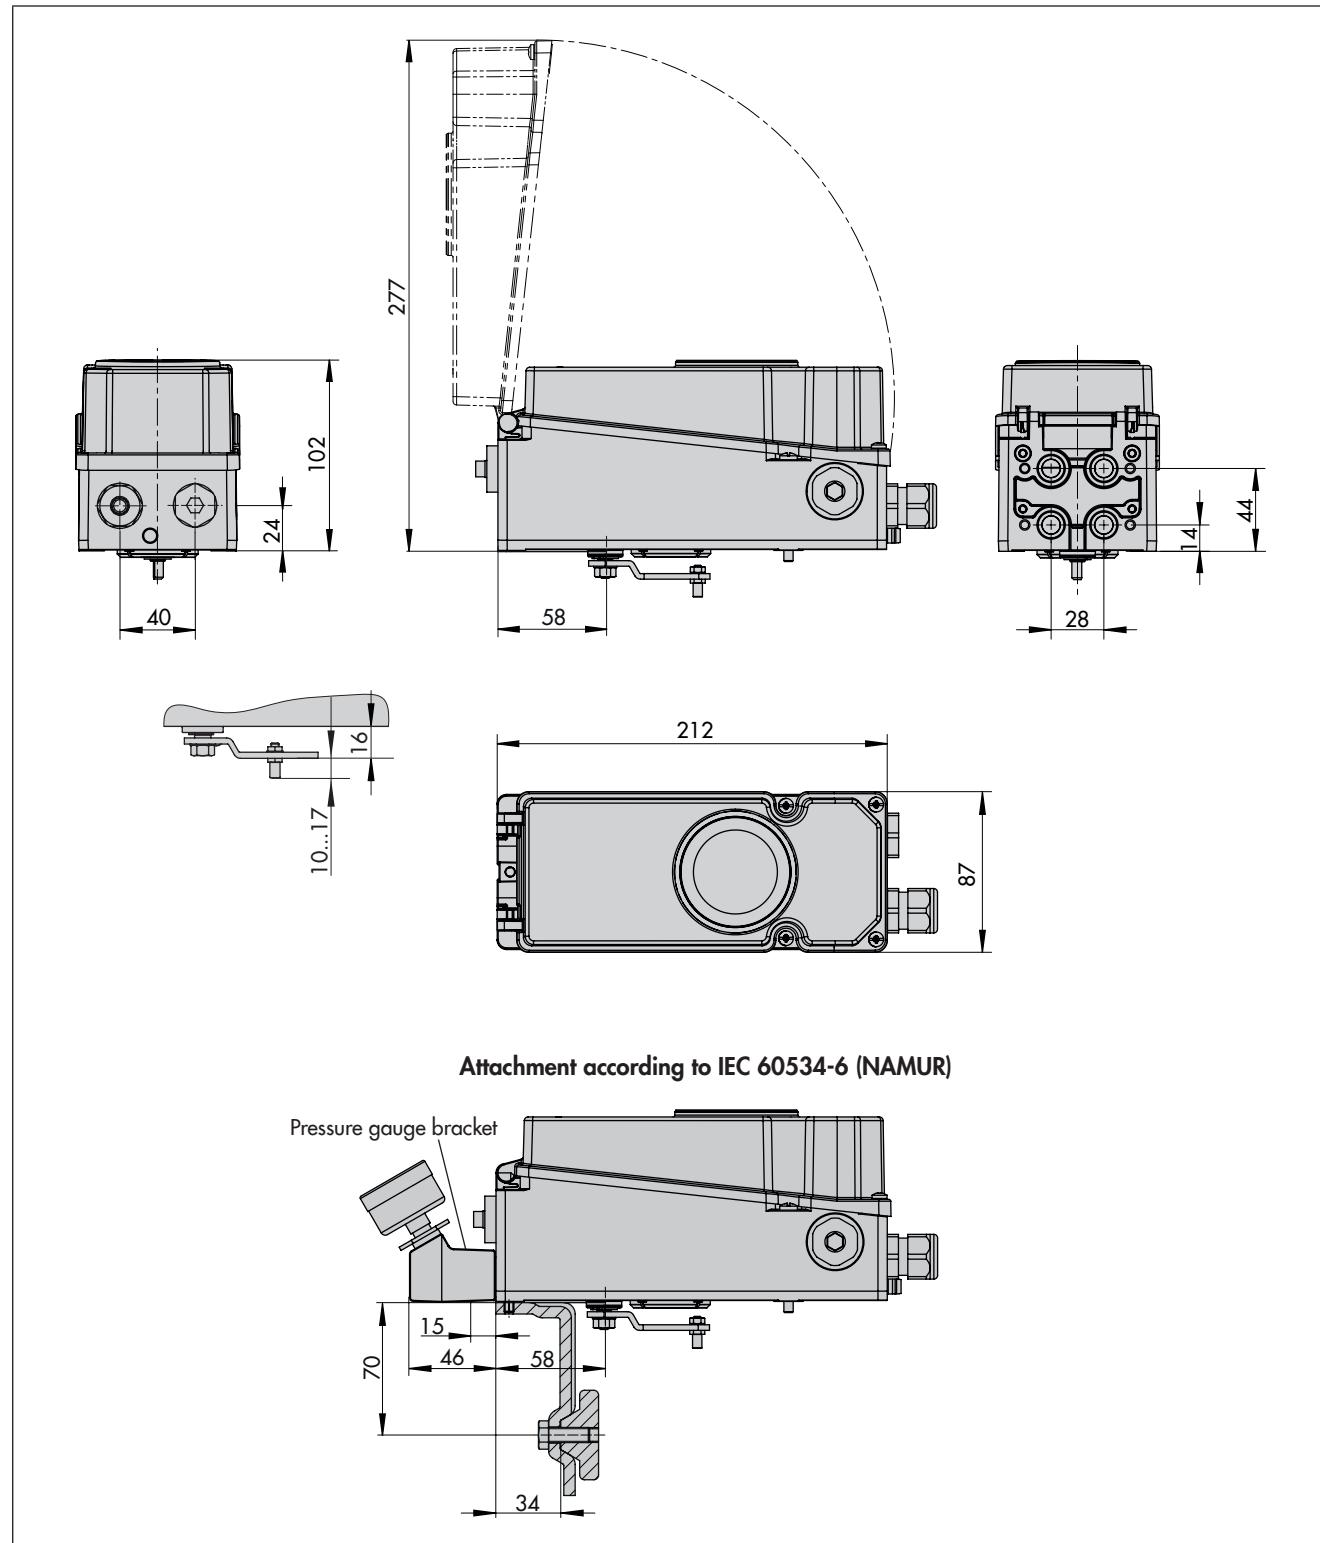

The initialization key activates initialization which is started

according to the ready adjusted parameters (autotune). After initialization is completed, the positioner immediately starts closed-loop operation.

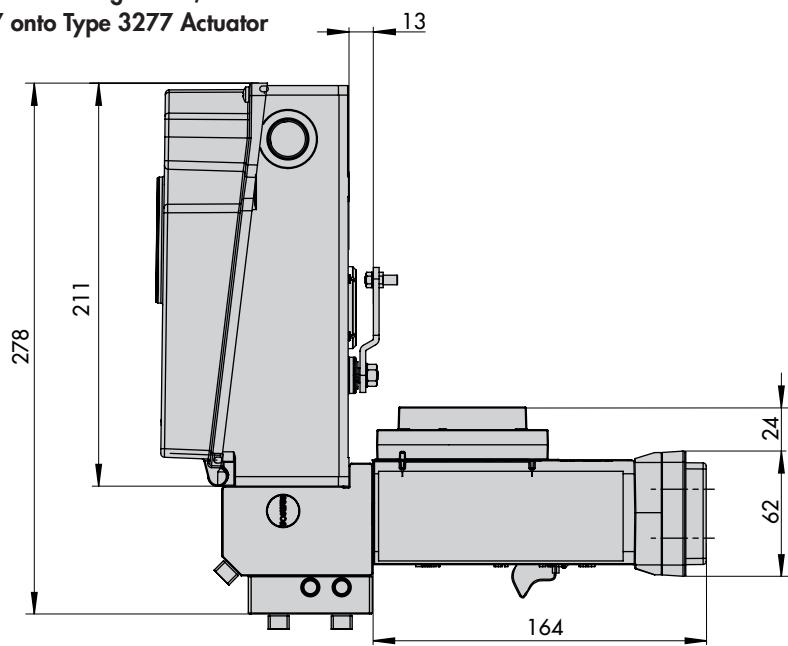

To configure the positioner with SAMSON's TROVIS-VIEW software, the positioner is equipped with an additional digital interface to be connected to the USB interface of a computer using an adapter.

Additionally, all parameters of the TROVIS 3793 Positioner can be accessed using HART® communication.
